Purpose of the

This page defines the FlashID design system to ensure consistency across all user interfaces including the citizen dashboard and administrator portals. This provides consistency with one centralized source of truth.

Colour Palette

 Primary Green #007A4D · rgb(0, 122, 77) Primary actions.	 Deep Green #053B2C · rgb(5, 59, 44) hover and active states.
 Accent Gold #FFB81C · rgb(255, 184, 28) For accents.	 National Red #DE3831 · rgb(222, 56, 49) Secondary support.
 National Blue #002395 · rgb(0, 35, 149) Tertiary support.	 Clean White #FFFFFF · rgb(255, 255, 255) Cards and containers.
 Cream Background #F7F4EA · rgb(247, 244, 234) App background.	 Text Primary #111827 · rgb(17, 24, 39) Main body text
 Muted Text #6B7280 · rgb(107, 114, 128) Captions and labels.	 Border Grey #E5E7EB · rgb(229, 231, 235) For outlines.
 Neutral Mid Grey #9CA3AF · rgb(156, 163, 175) Disabled elements.	 Success Green #16A34A · rgb(22, 163, 74) Success feedback.
 Warning Amber #D97706 · rgb(217, 119, 6) Warning states.	 Danger Red #DC2626 · rgb(220, 38, 38) Destructive actions

Typography System

Font Source

Inter - css custom property

TYPOGRAPHIC SCALE

NAME	SIZE	WEIGHT	USAGE	EXAMPLE
Display	48px	700 (Bold)	Hero sections, landing pages	Di...
H1	40px	700 (Bold)	Page titles	H1
H2	32px	600 (Semibold)	Section titles	H2
H3	24px	500 (Medium)	Subsection titles	H3
H4	20px	500 (Medium)	Small headings	H4
Body	16px	400 (Regular)	Paragraph text	Body
Caption	14px	400 (Regular)	For captions	Caption
Label	18px	600 (Semibold)	Form and interface labels	Label

Component Library

If the Button or Card components are modified, this section updates automatically.

Iconography

FlashID uses Lucide for modern icon systems paired well with shadcn/ui: `import { IconName } from "lucide-react"` . A few of which are:

Voice & Tone

Clear & Direct

Say what happened and what to do next.
No filler.

Reassuring & Secure

Sound calm and in control, especially around identity and security actions.

Plain Language

Avoid technical or legal jargon citizens would not use themselves.

Encouraging, Not Alarming

Errors are framed as fixable, not as failures on the part of the user.

Design Tokens

These tokens are the single source of truth for colour.Codebases must references these, instead of hardcoded values.

COLOUR

--primary	#007A4D
--accent	#FFB81C
--destructive	#DC2626
--background	#F7F4EA
--border	#E5E7EB

Accessibility Standards

Keyboard Navigation

- Every interactive element is reachable using the Tab key in a logical navigation order
- Dashboard dialogs and modals trap keyboard focus while open and restore focus to the triggering element when closed

Focus Indicators

- All interactive elements display a visible focus indicator during keyboard navigation
- Focus indicators meet WCAG 2.2 AA contrast requirements

Screen Reader Support

- All form controls have associated labels or accessible names
- Buttons, icons, and navigation controls include meaningful aria-label attributes where required

Reduced Motion

- The application respects the prefers-reduced-motion system setting
- Essential transitions remain brief and do not interfere with user interaction

Changelog from Demo 1

What changed since the Demo 1 guide, and why.

Added a dedicated Accessibility section

WCAG 2.2 AA conformance, keyboard/focus rules, and audit scores were not documented in Demo 1.

Added Voice & Tone guidelines

Copy across error states and buttons was inconsistent between contributors.

Added Design Tokens section

Formalises colour, spacing, radius, shadow, and motion tokens so the guide matches the codebase.

Split large sections into standalone components

The page had grown too large to maintain as a single file.
